Zone 8a
Not stated. The genus Allium contains approximately 700 species. Hardiness, size, and cultural requirements vary by species. Specific Atlanta Zone 8a performance cannot be stated without a named species or cultivar

ORIGIN AND CHARACTERISTICS

Origin
- Genus is native to the northern hemisphere, including Europe, Asia, and North America. Specific native status depends on the species

Form
- Bulbous or rhizomatous perennial. Most produce showy flower umbels on naked scapes above linear leaves

Foliage
- Linear, grass-like leaves. Most have onion or garlic odor when crushed. - Foliage typically dies back after flowering

Flowers and fruit
- Showy flower umbels. Color, size, and bloom time vary by species. Attract pollinators. - Fruit not stated

Bark
- Not applicable (herbaceous)

PLANTING NOTES

Establishment
- Plant bulbs in fall in well-drained soil. Deadhead to control self-seeding. Divide as needed. - Specific care depends on the species

HEALTH

Health
- Low severity poison characteristics for the genus. - Specific pests and diseases vary by species.
Bulb rot possible in overly moist soils

Symptoms
None stated
