OTHER

FLOWER

## QUICK FACTS

Plant Type: Bulbous perennial

**Evergreen or deciduous**
Deciduous

**Growth & Size**
Rate: Slow to medium
Size: 6–10 in (15–25 cm) × ~2–6 in

**Sun**

**Water**

**Soil**
Average, well-drained, preferably acid to neutral; retains spring moisture

**Zone 8a**
Suitable for Atlanta Zone 8a. Prefers cool spring growing season; afternoon shade may help in hot summers. Requires good drainage and dryish summer rest. Chilling hours needed for bloom

## PLANTING NOTES

**Establishment**
Plant bulbs ~5 in deep, 2–5 in apart in fall. Prefers sunny spot, acid soil that holds moisture in spring but drains well. Allow foliage to die naturally. Naturalizes and self-seeds in suitable conditions. Divide offsets every few years if congested. Low maintenance

## ORIGIN AND CHARACTERISTICS

**Origin**
Southwestern Europe and North Africa, mountain meadows and open areas

**Form**
Low-growing clump from true bulb; narrow, rush-like or grass-like dark green leaves. Distinctive morphology (enlarged corona). Division 10 (Bulbocodium).
consistent on size, culture, toxicity

**Foliage**
Narrow, channelled leaves appear with or after flowers; die back after spring

**Flowers and fruit**
Solitary (or few) yellow flowers with tiny perianth segments and large, flaring, funnel-shaped corona (“hoop petticoat”); early to mid-spring. AGM

**Bark**
N/A

## HEALTH

**Health**
All parts toxic if ingested (lycorine and other alkaloids); bulbs most dangerous. Can cause GI distress, contact dermatitis. Pests: possible slugs, narcissus bulb fly, eelworm, scale mite (common Narcissus issues). Diseases: basal rot, leaf scorch, viruses in wet conditions. Deer and rabbit resistant. No major unique problems stated beyond genus norms
