QUICK FACTS

Plant Type: Not stated

Evergreen or deciduous
Evergreen

Growth & Size
Rate: Not stated
Size: - 0.25–0.75 ft tall × 1–2 ft wide.
- Flower spikes to 8 in

Sun

Water

Soil
Prefers moist, humusy, well-drained soil.
- Not particular as to pH

Zone 8a
Suitable for Atlanta Zone 8a. Hardy Zones 4–8. Prefers moist, well-drained soil. Best foliage color in part sun. Crown rot possible in humid southern conditions if drainage is poor. Not stated for specific Atlanta urban performance beyond general hardiness

PLANTING NOTES

Establishment
- Plant in well-drained soil. Avoid wet, heavy soils. Divide when overcrowded. Good air circulation reduces crown rot risk.
- May be mowed after flowering to remove spent spikes (Gardenia)

ORIGIN AND CHARACTERISTICS

Origin
- Cultivar of Ajuga reptans, which is native to Europe. - Not native to North America. Species can be aggressive; listed as low threat in NC

Form
- Mat-forming evergreen perennial groundcover. Spreads by stolons

Foliage
- Bronze-green foliage. Large, glossy leaves.
- Semi-evergreen to evergreen

Flowers and fruit
- Blue flowers in whorls on spikes to 8 in. April–May.
- Attracts pollinators

Bark
- Not applicable (herbaceous perennial)

HEALTH

Health
- Crown rot can be a problem in humid conditions of the deep South and in heavy soils. - Generally pest free. Deer resistant

Symptoms
None stated
