QUICK FACTS

Plant Type: Not stated

Evergreen or deciduous
Herbaceous perennial

Growth & Size
Rate: Not stated
Size: 2–4 ft (60–120 cm) tall × 2–3 ft (60–90 cm) wide typical. Some up to 6 ft tall. Bushy, mound-shaped clump. Deep taproot

Sun

Water

Soil
Average, dry to medium, well-drained. Tolerates poor, sandy, rocky, clay, acidic soils. Prefers lean to average fertility

Zone 8a
Hardy Zones 5–8 (or 5–9). Excellent for Atlanta Zone 8a. Native to the region. Drought- and heat-tolerant once established. Prefers full sun and well-drained soil

PLANTING NOTES

Establishment
Low maintenance. Plant in permanent location (deep roots). Self-seeds. Trimming foliage after bloom optional (sacrifices seed pods). Propagate by seed or careful division. Excellent for native gardens, borders, meadows, prairie plantings. Heat and humidity tolerant

ORIGIN AND CHARACTERISTICS

Origin
Native to southeastern United States (including South Carolina Piedmont and beyond). Open dry woods, clearings, prairies

Form
Herbaceous perennial. Long-lived, clump-forming, bushy. Deep-rooted; does not transplant well once established. Blue-gray to charcoal stems. Long-lived perennial. Attractive seed pods

Foliage
Trifoliate (compound) leaves, blue-green to gray-green. Smooth. Turns blackish in fall. Attractive texture

Flowers and fruit
White (creamy white), pea-like flowers in upright racemes 12–18 in long. Early to mid-spring. Last 4–6 weeks. Attracts bees and butterflies; Black seed pods (legumes) 1–3 in long. Ornamental; hang downward. Attractive in dried arrangements

Bark
Not woody; stems with glaucous (blue-gray) bloom

HEALTH

Health
No major disease or insect problems. Deer-resistant. All parts poisonous if ingested. Larval host for some butterflies (e.g., duskywings)

Symptoms
None stated
