QUICK FACTS

Plant Type: Not stated

Evergreen or deciduous
Evergreen

Growth & Size
Rate: Not stated
Size: Prostrate/creeping; 1.5–2 ft high × 6–10 ft wide after 8–10 years. Fast lateral growth (8–12+ inches per year) that slows with age

Sun

Water

Soil
Moist, acidic, well-drained soils preferred; tolerates average soils and drought once established. Avoid poorly drained sites

Zone 8a
Hardy in USDA Zones 2–8. Suitable for Atlanta Zone 8a

ORIGIN AND CHARACTERISTICS

Origin
Cultivar of Pinus sylvestris (Scots pine), native to Eurasia. Selected as a seedling around 1970 by Layne Ziegenfuss at Hillside Nursery, Lehighton, Pennsylvania

Form
Evergreen conifer with low, horizontal, rambling branches forming a ground-covering mat. Needles in bundles of two, light green to gray-green; may turn yellowish-green in winter in colder climates. No significant fall color change. Bark typical of Scots pine (flaking orange-brown on older growth) but less prominent due to prostrate form. Strongly growing prostrate form that covers significant ground over time. Needles may show winter yellowing in colder zones. Useful where a low evergreen groundcover is desired

Foliage
Not stated

Flowers and fruit
Not stated

Bark
Not stated

PLANTING NOTES

Establishment

Plant in full sun with good drainage. Excellent for groundcover on slopes, banks, rock gardens, or as a low specimen/accent. Low maintenance once established. Propagate by grafting or from selected seed

HEALTH

Health

Generally tough and low-maintenance. Potential issues shared with the species include Sphaeropsis (Diplodia) tip blight, pine wilt nematode, sawflies, moths, and scale in some areas. Deer resistant

Symptoms

None stated
