QUICK FACTS

Plant Type: Palm

Evergreen or deciduous
Evergreen

Growth & Size
Rate: Not stated
Size: 3–8 ft tall, 3–10 ft wide; occasionally to 15 ft in dense habitats. Clumping, multi-trunked, creeping rhizomes often subterranean. [Unusual Palms and Plants; PlantVine; Advanced Nursery Growers; UF/IFAS FPS-547]

Sun

Water

Soil
Sandy, well-drained soils; tolerates poor fertility and salt. [Unusual Palms and Plants; PlantLust; NC State Extension]

Zone 8a
Hardy to Zone 8a (approximately 10°F / −12°C). Leaf damage possible below 5°F. Suitable for Atlanta with protection in extreme cold. Native range includes coastal Southeast; silver form more common near coasts. [Unusual Palms and Plants; Dave's Garden; PalmTalk forum notes]

ORIGIN AND CHARACTERISTICS

Origin
Southeastern United States (SC to MS, primarily Florida coastal dunes, pine flatwoods, scrub). Silver form found naturally along Florida's east coast.
[UF/IFAS FPS-547; NC State Extension; PlantLust]

Form
Evergreen fan palm. Palmate leaves 18–30 stiff segments, silvery-blue to silver-white above and below, up to 3 ft wide. Petioles armed with fine teeth (saw-like). Horizontal or ascending trunks covered in persistent leaf bases; rarely upright. No fall color change. [Unusual Palms and Plants; UF/IFAS; Palmpedia]. Fire-adapted and clonal. High salt tolerance. Wildlife value for cover and fruit. Invasive status: native, not invasive. [UF/IFAS; Advanced Nursery Growers]

Foliage
Not stated

Flowers and fruit
Not stated

Bark
Not stated

PLANTING NOTES

Establishment

Plant in full sun to part shade in well-drained sandy soil. Drought tolerant once established. Give room to spread by rhizomes. Suitable for coastal, native, and firewise plantings. [Unusual Palms and Plants; PlantVine]

HEALTH

Health

Generally free of serious problems. Petiole spines can cause injury. Palmetto scale and cabbage palm caterpillar noted on species but not specifically reported on ‘Cinerea’. [NC State Extension; UF/IFAS]

Symptoms

None stated
