QUICK FACTS

Plant Type: Not stated

Evergreen or deciduous
Deciduous

Growth & Size
Rate: Not stated
Size: 30–60 ft (9–18 m) high × 20–40 ft (6–12 m) wide in cultivation (up to 120 ft in the wild)., broadly conical to spreading.
Horizontal branches with droopin

Sun

Water

Soil
Avoid limestone/alkaline soils

Zone 8a
Hardy in USDA Zones 4–7. Marginal to suitable in Atlanta Zone 8a; prefers cooler conditions and acidic soil. Best as a specimen in sheltered sites. Outstanding golden fall color

ORIGIN AND CHARACTERISTICS

Origin
Native to coastal mountains of southeastern China. Closely resembles true larches (Larix) but differs in cone morphology and is not a true larch (Pseudolarix = false larch)

Form
Deciduous conifer with soft, light green needles (blue-green beneath) in tuft-like clusters on short shoots. Brilliant golden-yellow fall color before needles drop. Erect reddish-brown fruiting cones (~3 in) that disintegrate when ripe. Mature bark fissured, reddish-brown. Distinctive winter architecture. False larch with superior golden fall color. Soft needles and distinctive cones. Slow growth makes it manageable in landscapes. Best in acidic soils and cooler microclimates within its range

Foliage
Not stated

Flowers and fruit
Not stated

Bark
Not stated

PLANTING NOTES

Establishment

Plant in full sun with moist, acidic, well-drained soil. Avoid limestone. Slow-growing; good specimen tree. Propagate by seed or softwood cuttings. Excellent fall color and winter form. Can be used in bonsai

HEALTH

Health

Low maintenance. No serious problems stated. Intolerant of full shade and alkaline soils. Generally pest-free when conditions are suitable

Symptoms

None stated
