QUICK FACTS

Plant Type: Deciduous tree

Evergreen or deciduous
Suitable for Atlanta Zone 8a. Heat tolerant with adequate moisture. Selected for clean, attractive summer foliage that holds up well. Good shade tree or street tree candidate. Fragrant flowers. Medium to fast growth. Monitor for typical Tilia issues in humid climates

Growth & Size
Rate: Not stated
Size: 40–50 ft (12–15 m) tall; 25–28 ft (7.5–8.5 m) wide.
Dense crown, narrow oval becoming pyramidal with ascending branches

Sun

Water

Soil
Best in deep, moist, fertile soils but tolerates a range of conditions including heavier soils

Zone 8a
Suitable for Atlanta Zone 8a. Heat tolerant with adequate moisture. Selected for clean, attractive summer foliage that holds up well. Good shade tree or street tree candidate. Fragrant flowers. Medium to fast growth. Monitor for typical Tilia issues in humid climates

ORIGIN AND CHARACTERISTICS

Origin
Cultivar of a species native to eastern North America. Patented by Willet Wandell, Urbana, Illinois, 1975.
Once considered a selection of Tilia heterophylla

Form
Upright, narrow oval to pyramidal form with dense crown and ascending branches. Fast growing

Foliage
Alternate, simple, large leaves 9–15 cm long × 7–10 cm wide. Dark green above with whitish pubescence below. Retains attractive foliage through summer and fall (does not develop the “worn” appearance of some species).
Bright yellow fall color

Flowers and fruit
Pale yellow, fragrant flowers in clusters after leaves expand. Attractive to bees

Bark
Not stated

PLANTING NOTES

Planting
None stated

HEALTH

Health
Generally few serious problems stated. Like other lindens, may be susceptible to Japanese beetles, aphids, or sooty mold in some conditions. Selected for improved foliage appearance. No unique issues noted

Symptoms
None stated
