QUICK FACTS

Plant Type: Not stated

Evergreen or deciduous
Evergreen

Growth & Size
Rate: Not stated
Size: 30–50 ft tall × 20–35 ft wide in landscape. Up to 150 ft in the wild. Spread typically half to two-thirds the height

Sun

Water

Soil
Avoid alkaline, shallow, or poorly drained soils

Zone 8a
Hardiness rated Zone 5–8 depending on seed . Oregon State notes ratings from Zone 8 to Zone 4. Conifers.org lists hardy to Zone 8. Suitable for Atlanta Zone 8a with protection from severe winter winds, which can cause needle browning. org; HortGuide

ORIGIN AND CHARACTERISTICS

Origin
Native to the temperate Himalayas, from eastern Afghanistan through northern Pakistan and India to Yunnan, China. Elevations 6,000–14,000 ft (1,800–4,300 m). Introduced to cultivation in 1827. org; Missouri Botanical Garden

Form
Evergreen conifer. Loosely pyramidal when young, becoming graceful with age. Broad base with horizontal lower branching and slightly ascending upper branching. Drooping needles give a feathery appearance. Fast-growing when young. Needles bend near the base, creating the characteristic pendulous look. Award of Garden Merit. Growth rate listed as fast (HortGuide) to slow-to-medium

Foliage
Five needles per bundle, 5–8 in (13–20 cm) long, gray-green to blue-green, often bent near the base and pendulous on older shoots. Evergreen. org

Flowers and fruit
Not stated

Bark
Gray-green and smooth when young, even on branches several years old. Becomes dark-gray to dark brown and fissured in scales with age

PLANTING NOTES

Establishment

Plant in full sun on well-drained acid soil. Shelter from strong cold winds. Difficult to transplant. No regular pruning required; remove competing leaders if needed.
net; Boone County Arboretum

HEALTH

Health

Less susceptible to white pine blister rust than many North American five-needled pines. Watch for pine adelgid, aphids, spider mites, and honey fungus. Severe winter winds may cause needle browning. No serious problems stated when properly sited. net

Symptoms

None stated
