QUICK FACTS

Plant Type: Not stated

Evergreen or deciduous
Semi-evergreen

Growth & Size
Rate: Not stated
Size: 60–80 ft tall and wide.
Variable form intermediate between parents; some more upright, others broader

Sun

Water

Soil
Tolerates a wide range of soils from moist to dry sandy.
Adaptable to various pH levels

Zone 8a
Native to southeastern United States where parent species overlap (Virginia to Texas). Suitable for Atlanta Zone 8a.
Semi-evergreen to tardily deciduous in the South

PLANTING NOTES

Establishment
Easy to establish. Plant in full sun on well-drained soil.
Allow space for the potentially broad crown

ORIGIN AND CHARACTERISTICS

Origin
Natural hybrid of Quercus lyrata (overcup oak) and Quercus virginiana (southern live oak). Occurs in the southeastern United States where the parent ranges overlap

Form
Semi-evergreen to tardily deciduous hybrid. Leaves leathery, oblanceolate, 3–6 in long, dark green, margins entire to shallowly lobed. Fall color yellow, red, or burgundy when leaves drop. Bark smooth gray when young, becoming furrowed with age. Acorns enclosed one-third to three-quarters by the cup. Features highly variable between individuals. Leaves often persist into early winter. Acorns valued by wildlife.
Strong structure noted by arborists
