QUICK FACTS

Plant Type: Evergreen conifer tree or large shrub

Evergreen or deciduous
Evergreen

Growth & Size
Rate: Not stated
Size: Typically small to medium, often 5–15 m (15–50 ft) in cultivation; can reach larger in native habitat.
Variable form

Sun

Water

Soil
Moist, well-drained, acidic to neutral soils

Zone 8a
Potentially suitable for Atlanta Zone 8a with protection and good culture (hardiness estimated Zones 6–9). Heat and humidity tolerance not extensively documented in the Southeast. Requires consistent moisture and excellent drainage. Rare in cultivation. Open items for local performance and heat stress

PLANTING NOTES

Planting
None stated

ORIGIN AND CHARACTERISTICS

Origin
Native to southern and central China (Anhui, Fujian, Guangdong, Guangxi, Guizhou, Hubei, Hunan, Jiangxi, Sichuan, Taiwan, Yunnan, Zhejiang, etc.), northern India, Myanmar, Vietnam. Coniferous and mixed forests, thickets, open slopes; 100–3500 m

Form
Evergreen tree or shrub, often with ascending to erect then drooping branches. Pyramidal to rounded crown. Dioecious

Foliage
Linear, usually falcate leaves, 2–3.5 cm × 2.5–4 mm, thick. Dark green above; midvein of different color to stomatal bands. Margin revolute. Two-ranked arrangement

Flowers and fruit
Not stated

Bark
Not stated

HEALTH

Health
Generally few problems stated in botanical . Like other Taxus, susceptible to root rot in poorly drained soils and possible scale or spider mites under stress.
All parts (except aril flesh) highly toxic if ingested

Symptoms
None stated
