QUICK FACTS

Plant Type: Herbaceous perennial

Evergreen or deciduous
Excellent for Atlanta Zone 8a. Heat tolerant and dramatic vertical accent. Best in full sun with average to moist soil. Tall stalks provide late-summer interest and winter seed for goldfinches. Low maintenance; cut back after seed or leave for wildlife

Growth & Size
Rate: Not stated
Size: 5–9 ft (1.5–2.7 m) tall in bloom; basal clump 2–4 ft (0.6–1.2 m) wide.
Flower stalks nearly leafless

Sun

Water

Soil
Prefers moist, fertile, well-drained soils. Tolerates clay and a range of pH. Self-seeds and may spread by rhizomes in ideal conditions

Zone 8a
Excellent for Atlanta Zone 8a. Heat tolerant and dramatic vertical accent. Best in full sun with average to moist soil. Tall stalks provide late-summer interest and winter seed for goldfinches. Low maintenance; cut back after seed or leave for wildlife

ORIGIN AND CHARACTERISTICS

Origin
Native to the south-central United States

Form
Basal clump of large leaves with tall, sparsely-leaved flowering stems rising well above the foliage

Foliage
Large, paddle-shaped (to 24 in / 60 cm long), glaucous bluish-green basal leaves. Smooth to slightly toothed. Stem leaves few and smaller. Semi-evergreen in warm climates

Flowers and fruit
Yellow-rayed coneflowers (to 3 in / 7.5 cm across) with slightly drooping rays and tall dark brown to nearly black central cones (2–6 in / 5–15 cm high). Summer bloom (June–August). Excellent for birds (seed)

Bark
Not stated

PLANTING NOTES

Planting
None stated

HEALTH

Health
Generally pest-free. Deer resistant. No serious problems stated. Powdery mildew possible in crowded, humid conditions but uncommon. Young plants may be vulnerable to slugs/snails

Symptoms
None stated
