QUICK FACTS

Plant Type: Not stated

Evergreen or deciduous
Hardiness zones 4–8/9 listed. Species native to central/southern US plains. Suitable for Zone 8a with good drainage; heat and humidity tolerance not extensively documented but low-water habi supports use.
Explicit Atlanta performance: No

Growth & Size
Rate: Not stated
Size: 6–10 in. tall × 12–20 in. wide (or ~15 cm height).
Low spreading/clumping ground cover

Sun

Water

Soil
Dry to average, well-drained, gritty/sandy/rocky soils. Tolerates poor soils

Zone 8a
Hardiness zones 4–8/9 listed. Species native to central/southern US plains. Suitable for Zone 8a with good drainage; heat and humidity tolerance not extensively documented but low-water hab supports use. Explicit Atlanta performance: Not stated

ORIGIN AND CHARACTERISTICS

Origin
Selection of Oenothera macrocarpa ssp. fremontii, native to Kansas/Nebraska and central US.
Introduced by Jelitto 2004. Garden origin cultivar. (Jelitto.)

Form
Low spreading perennial with narrow silver-gray lance-shaped leaves. Large papery golden-yellow cup-shaped flowers (June–September). Distinctive four-winged seed pods. No notable fall color. Mildly fragrant flowers open late afternoon. Attractive silver foliage. Self-seeds. Suitable for dry sites

Foliage
Not stated

Flowers and fruit
Not stated

Bark
Not stated

PLANTING NOTES

Establishment

Excellent for rock gardens, borders, xeriscape, ground cover.
Protect from excessive winter wet.
First-year flowering. Propagate by seed

HEALTH

Health

Low maintenance. Possible slugs/snails or root rot in poor drainage (species-level). Generally no serious problems stated

Symptoms

None stated
