QUICK FACTS

Plant Type: Deciduous shrub

Evergreen or deciduous
Deciduous

Growth & Size
Rate: Not stated
Size: 20–70 cm (8–28 in) tall; spreads by rhizomes to form colonies.
Low, spreading groundcover-like

Sun

Water

Soil
Moist soils

Zone 8a
Excellent for Atlanta Zone 8a. Native to Georgia. Heat and humidity tolerant. Outstanding low groundcover for moist shaded sites, stream banks, and woodland gardens. Yellow roots historically used for dye and medicine. Spreads by rhizomes. Low maintenance. Attractive fine texture

PLANTING NOTES

Planting
None stated

ORIGIN AND CHARACTERISTICS

Origin
Native to eastern North America (Alabama, Florida, Georgia, and many other eastern states). Endemic

Form
Low, multi-stemmed deciduous shrub. Stems 20–70 cm, smooth bark ringed with leaf scars. Inner bark yellow.
Spreads to form thickets

Foliage
Leaves clustered near stem apex, to 18 cm. Leaflets 3–5, 2.5–10 × 2–8 cm. Resembles celery leaves. Deciduous

Flowers and fruit
Small flowers in broad-paniculate inflorescences 6–21 cm. Sepals spreading, acuminate. Petals with nectary. Spring–summer (April–May). Not showy; Yellowish-brown, glossy, somewhat inflated follicles 3–4 mm. Distally ciliate

Bark
Not stated

HEALTH

Health
Generally pest- and disease-free. No serious problems stated. Inner bark and roots contain bitter principles; historically medicinal

Symptoms
None stated
