QUICK FACTS

Plant Type: Not stated

Evergreen or deciduous
Native to the southeastern United States (Virginia to Florida, west to Mississippi). Suitable for Atlanta Zone 8a. Hardy perennial.
Attracts pollinators. Fragrant foli

Growth & Size
Rate: Not stated
Size: 1.5–3.5 ft (0.5–1.1 m) high × 1–3 ft (0.3–0.9 m) wide. Upright, slow-spreading rhizomatous perennial. Erect, quadrangular, freely branched stems

Sun

Water

Soil
Moist but well-drained, rich loamy soil preferred; adaptable to a range of soils and pH. Tolerates drier conditions once established. Slow rhizomatous spread

Zone 8a
Native to the southeastern United States (Virginia to Florida, west to Mississippi). Suitable for Atlanta Zone 8a. Hardy perennial. Attracts pollinators. Fragrant foliage

ORIGIN AND CHARACTERISTICS

Origin
Native to the southeastern United States: Alabama, Florida, Georgia, Mississippi, North Carolina, South Carolina, Virginia, etc. Found in coastal and Piedmont areas, often on alkaline soils in native habitat

Form
Herbaceous perennial with aromatic, elliptic to elliptic-lanceolate leaves (1.5–5 cm). Compact, head-like clusters of white to pale lavender flowers in terminal thyrses in summer. Square stems. Forms clumps. Seedheads provide winter interest. No notable fall color. Southeastern native mountain mint. Dense clusters of small white to lavender flowers. Aromatic foliage. Less aggressive than many mints. Good wildlife and pollinator value. NC native in coastal/Piedmont regions

Foliage

Flowers and fruit
Not stated

Bark
Not stated

PLANTING NOTES

Establishment

Plant in full sun to partial shade with well-drained soil. Divide every other year to maintain appearance. Propagate by seed or division in spring. Excellent for pollinator gardens, borders, or naturalized areas. Fragrant foliage can be used for tea. Slow rhizome spread

HEALTH

Health

No serious problems stated. Attracts bees, butterflies, moths, and wasps. Slow-spreading compared to other mints. Generally low maintenance

Symptoms

None stated
