QUICK FACTS

Plant Type: Evergreen to semi-evergreen fern

Evergreen or deciduous
Potentially suitable for Atlanta Zone 8a with protection and consistent moisture (hardiness not extensively documented). Heat and humidity may be tolerated in shaded, moist sites. Rare in cultivation. Open items for local performance. Attractive large fern for woodland gardens if successful

Growth & Size
Rate: Not stated
Size: Fronds 35–70 cm (14–28 in) long; 15–45 cm wide. Clump-forming with decumbent rhizomes

Sun

Water

Soil
Moist soils. Roadsides, mountain slopes

Zone 8a
Potentially suitable for Atlanta Zone 8a with protection and consistent moisture (hardiness not extensively documented). Heat and humidity may be tolerated in shaded, moist sites. Rare in cultivation. Open items for local performance.
Attractive large fern for woodland gardens if successful

ORIGIN AND CHARACTERISTICS

Origin
Native to southeastern China (Anhui, Fujian, Guangdong, Guangxi, Hunan, Jiangxi, Zhejiang), Japan, Philippines. About 500 m elevation

Form
Rhizomatous fern with stout, densely scaly rhizomes. Large bipinnatifid fronds

Foliage
Deeply bipinnatifid, leathery, glabrous fronds. Ovate, 35–45(–70) × 15–45 cm. Pinnae 6–8 pairs, deeply pinnatifid. Small bulbils may form on adaxial surfaces of pinna lobes. Crescent-shaped or elliptic sori in costular areoles

Flowers and fruit
Not stated

Bark
Not stated

PLANTING NOTES

Planting
None stated

HEALTH

Health
No serious problems stated in botanical . Generally pest- and disease-free. Requires good drainage to avoid rot

Symptoms
None stated
