QUICK FACTS

Plant Type: Deciduous climbing vine

Evergreen or deciduous
Woody climbing vine

Growth & Size
Rate: Not stated
Size: Climbs 40–50 ft (12–15 m); spread 6–9 ft (1.8–2.7 m) depending on support.
Self- clinging via aerial roots

Sun

Water

Soil
Average water; prefers moist but well-drained soils.
Tolerates a range of soils if drainage is good

Zone 8a
Well suited to Atlanta Zone 8a. Prefers part shade and protection from hottest afternoon sun. Excellent for woodland edges, north-facing walls, or trained on trees/structures. Heat and humidity tolerant once established. Slow to establish but long-lived and showy when mature

PLANTING NOTES

Planting
None stated

ORIGIN AND CHARACTERISTICS

Origin
Selection of a species native to Japan and Korea

Form
Woody climbing vine. Needs support (tree, wall, pergola, chimney)

Foliage
Heart-shaped to ovate, toothed leaves.
Young shoots often purplish. Deciduous. Tidy appearance

Flowers and fruit
Showy sterile florets (single sail-like sepals) in rose-pink or white (depending on exact cultivar form), surrounding clusters of fertile white florets. Fragrant.
Summer bloom (June–July). Attracts pollinators

Bark
Not stated

HEALTH

Health
Generally pest- and disease-free. No serious problems stated. Avoid poor drainage. May need initial training and occasional pruning after bloom

Symptoms
None stated
