QUICK FACTS

Plant Type: Needled evergreen conifer (living fossil)

Evergreen or deciduous
Adapted to Atlanta Zone 8a (hardy Zones 5–8/9). Prefers protection from extreme heat and drying winds; afternoon shade and consistent moisture improve performance. Excellent specimen tree. Slow growth means long-term investment. Unique foliage provides year-round interest

Growth & Size
Rate: Not stated
Size: In cultivation 25–30 ft (7.5–9 m) tall, 15–20 ft (4.5–6 m) wide. Very slow growing (often only 4–5 ft in 10 years).
Native habitat to 90+ ft

Sun

Water

Soil
Sheltered from strong winds

Zone 8a
Adapted to Atlanta Zone 8a (hardy Zones 5–8/9). Prefers protection from extreme heat and drying winds; afternoon shade and consistent moisture improve performance. Excellent specimen tree. Slow growth means long-term investment.
Unique foliage provides year-round interest

ORIGIN AND CHARACTERISTICS

Origin
Endemic to Japan (Honshu, Shikoku, Kyushu).
Monotypic genus; living fossil

Form
Dense, narrow conical to pyramidal in youth; opens with age.
Single- or multi-stemmed. Heavy branching

Foliage
Unique photosynthetic “leaves” (actually fused cladodes) in dense whorls of 10–30 at shoot tips, resembling umbrella ribs. Linear, thick, fleshy, glossy dark green, 4–13 cm long. Persist 3–4 years. True leaves are small scale-like and non-showy

Flowers and fruit
Not stated

Bark
Not stated

PLANTING NOTES

Planting
None stated

HEALTH

Health
Generally pest- and disease-free. No serious problems stated.
Root rot possible only in poorly drained sites.
Low maintenance once established

Symptoms
None stated
